

## Procedure: Modified Curriculum and Transcript Indicators

The following definitions and procedures apply to students whose curriculum is modified, which will also have an accompanying indication on their transcript for each course that was completed with modified curriculum. Please refer to the definitions and flow chart below to determine whether a student's course curriculum can be defined formally as modified, and under what circumstances their transcript would have an indication of modified curriculum.

**Modified Definition:** Modified curriculum is fundamental changes to the material and/or learning to a different level. The student will be given reduced or changed coursework to align with students specific needs and goals. Modifications allow for access to standards, but the student does not need to pass the standards in the same way as non-modified curriculum peers would in order to pass a class.

**Minimum Modified Content Requirement:** If 15% or more of the assigned curricular content of the course in a given semester is modified for the student, the course will be designated as modified on the transcript for that given semester. The student's assignment scores would be entered into a separate Skyward coursebook. The modified curriculum notation will be included in all places and on all documents where any academic record takes place. In the event that a course is a year long course, the final grade will also have an indication that indicates that the grade includes modified content. The notation will be a footer at the bottom of the transcript with a statement indicating the course name and that the course was a modified content course.
